Flight Operations Consulting

## Ingold Aviation LLC

Ingold Aviation LLC has been founded in 2018 to help flight operations departments to meet their client's expectations and regulatory requirements.

Beforehand, we made sure that the required knowledge and expertise has been obtained through decades in various positions in the field of flight operations – from airlines to business aviation, from copilot to Director of Flight Operations. The employees of Ingold Aviation LLC have gone through all the career steps to be able to provide you with a wholesome approach to your challenge.

Through honesty, integrity,  
trust and transparency  
we will take you and your  
enterprise to new heights!

## Flying

Pilots from Ingold Aviation LLC come with all the required trainings and – most importantly – with the right attitude to perform their duties according to your requirements and the requirements set forth by various authorities. How can we assist you?

## Pilot – F2TH EX EASy

Our pilots are trained to the highest possible standards with regards to safety, standard operating procedures, VVIP treatment as well as economical aspects. They are available on very short notice for day trips, weekly or even monthly assignments.

Some Advantages:

- No additional non-wage labor costs
- Worldwide experience
- EASA licenses
- Trained and proficient on F2TH EX EASy, DX, LX, S and LXS models
- Additional trainings, such as RVSM, MNPS (HLA) and Dangerous Goods, are current
- Captain, Line Training Captain and Type Rating Instructor
- Current multiple entry visa for China, Russia and USA
- Vaccinations up to date

Pilots for other aircraft types are available on demand.

## Safety Pilot

If you do not feel comfortable flying your single pilot airplane alone through complex airspaces and into demanding airports, Ingold Aviation LLC can provide you with experienced pilots to accompany you on your journey. Whether it be on a light single engine piston airplane like a Cessna 172 or a single engine turbo-prop airplane like a Pilatus PC-12 or even a multi engine jet like a Cessna CJ3+, let an Ingold Aviation pilot be your additional safety device for your next trip.

## Project Consulting

Our consultants can provide you with expert advice on various subjects in the field of Flight Operations. What are your needs?

## Regulatory Compliance Audits

There is an abundance of regulations in the field of aviation. An operator needs to show to the regulator that they are in compliance with them. This is done through regular audits of all internal processes and external services used.

Our auditors are certified Aviation Auditors, who can assist you to show compliance with various international regulations, such as the regulations set forth by the European Aviation Safety Agency (EASA). Please get in contact with us to see how we can help you with this important task.

## Interim Management

Is your organization undergoing change, are you in some kind of transition, or are you facing a crisis?

Our experienced staff can help you in these challenging phases through taking over important roles and the challenges and responsibilities that come with it. In addition to the tasks at hand, Ingold Aviation LLC will make your organization ready for the time when our engagement is terminated through selecting the right people for the job and training them adequately for their future challenges. Ingold Aviation has experience in the following managerial roles:

- Director Flight Operations
- Nominated Person Flight Operations
- Flight Safety Officer
- Compliance Monitoring Manager

## Crew Assessments

Having the right people in the right place is crucial for the success of a company – especially in such a safety-conscious environment as aviation. Common sense and, in some countries the regulator, therefore dictate that a new pilot or flight attendant shall be assessed for his or her suitability to the job and the organization. Ingold Aviation LLC has years of experience in assessing and hiring pilots and flight attendants for airlines and business aviation. Our assessment process has various stages, which can be personalized to your needs through selecting the appropriate module:

- Developing and checking of requirements for crew members
- Interview
- Psychometric assessment including simulator
- Testing of position-related knowledge
- Checking of English language proficiency
- Background checks
- Drug and Alcohol screening

Ingold Aviation LLC, through one of our partners, has also the capability to constantly monitor the psychological well-being of your crew members confidentially through regular questionnaires. ►

## Consulting

The field of Flight Operations is very complex and demanding at times. Leading people, managing customer needs and overseeing regulatory requirements while maintaining a safe and economically sound department takes a lot of resources. Additional projects, such as the addition of a new aircraft to the operation, can then quickly exceed the capacity of an organization.

Before you get to this point, call or email us to see how we can assist you with your current challenge. Our experienced consultants will cover the temporary additional need for manpower and knowledge so you can focus on your core business.

## Regulations Monitoring

Regulations in the aviation industry are constantly changed or amended. From time to time, there are even new regulations coming out. It is very difficult to keep track of all these regulations. At the same time, though, an operation is responsible for adhering to them – without exception.

Ingold Aviation LLC can monitor these regulations for you, so you can focus your resources on other tasks. You will be getting regular reports, and – if desired – you will get suggestions for implementing the amended/changed regulation.

Ingold Aviation LLC can monitor almost any regulation, but has years of working experience with:

- European Aviation Safety Agency Regulations (EASA)
- Overseas Territories Aviation Requirements (OTAR)
- Air Navigation Overseas Territories Order (ANOTO)
- Air Navigation (Isle of Man) Order

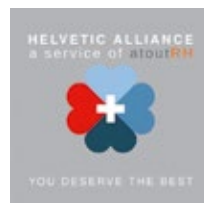

## Crew Resource Management Training

Crew Resource Management Training is a vital aspect of the safety culture of an organization. While it is mandatory for Pilots and Cabin Attendants in a commercial environment, such training can also be an invaluable asset for other employees, such as Dispatchers and Maintenance Coordinators and the senior leadership.

Ingold Aviation LLC can provide you with Crew Resource Management Training for the whole organization. We see to it that the participants of an Initial Operator's Training, Operator Conversion Course, Annual Recurrent Training or a Command Course are not just given the legal minimum, but that they are captivated by it.
